The following is an examiner's statement of reasons for allowance: The prior art does not teach to transfer substantially all of the ions produced in a relatively high pressure region into a lower pressure region by means of a stratified tube made up of alternating electrodes and insulating bases with an electrostatic potential gradient established along the tube so that the electrostatic field lines produced direct the ions substantially along the axis from the high pressure region to the lower pressure region.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
